

## Carcassonne: natural disaster-volcanic eruption

### Contents:

5 volcanic plates (Source: Kakasong third expansion Fire Dragon and Princess)

### Additional rules:

#### 1. Natural disaster (destruction) effect

#### 2. The ninth extension of the hill effect of sheep and hills

When the volcanic plate in the expansion of the fire dragon is surrounded by the surrounding eight pieces, immediately turn the eight pieces except the volcano to the back and the Mibao that is already on the plate and rush home immediately (including the eighth plate, even if a certain castle is completed) No points can be scored in the road monastery, and the eighth film activates the natural disaster (destruction) effect. The current player cannot place Mi Bao to be forced to turn over).

The eight back plates around the volcanic plate are regarded as blank and will be repositioned above the back plate (with sheep expanding the hill effect). If the volcanic plate is surrounded by another eight plates, the natural disaster effect will occur again, and all eight plates will be turned over again. Face to back C plate. The natural disaster (destruction) effect is permanent.

Variation rules: volcanoes have a chain effect, as long as the first volcano block completes encirclement to produce a volcanic eruption. As long as there is a second volcanic section in the surrounding eight sections (whether surrounded or not), it will have a chain effect (a volcanic eruption at the same time).

Q&A:

1. Is it possible for forts and bridges to be moved out of the field to return to the player's supply area?

Ans: No, fortresses and bridges are one-off functions. After use, it is removed and placed back in the box. No longer being used.

2. The effect of volcanic hills. How does the number of rice treasures compare with the number of rice treasures placed on the third floor?

Ans: For example, the road has the same number of v, and the red players on the third layer are more dominant than the green players on the second layer. Even if the two Meeple on the other side are both on the second layer, the players on the third layer are still Get points. First compare the number of rice treasures, and then compare the terrain.

3. Is it possible that the starting blocks such as the Wheel of Fortune will be reversed?

Ans: As long as the starting section will not be reversed (including the basic starting section, river 1&2, school, wind rose, wheel of fortune, earl city, Leipzig market, etc.), but the rest of the general sections must be reversed.

4: Assuming that two volcanoes are adjacent to each other, will one of the volcanoes erupt, will it have a knock-on effect?

Ans: Yes. The volcanic plate itself will not be turned over, but it will cause a chain reaction of another volcano, causing the surrounding plates of the two volcanoes to turn over.

5. When the goods on the castle are completed for the second time, will they get the goods (wine, wheat, cloth) with piggy expansion again?

Ans: No. Only available when it is completed the first time. Because the goods are limited.

So when you first play, as long as there are goods on the board, you must take the corresponding goods and place them on the board. As long as the board is taken away, it means that the goods reward will not appear.

## 6.Volcano

Rule advantages:

1. Reduce the section to occupy the desktop
2. Has a hill effect
3. Cut terrain or transform new terrain, more fun
4. Score more or hinder the opponent from completing the project
5. Take 5 tiles directly from the third expansion Fire Dragon and Princess take the volcano.

Example 1:

In this case, it is the turn of the pink player to get a terrain tile that matches the blank area 8 on the left.  
note:

As long as the eighth plate around the volcano plate, players cannot place Meeple during the turn after placing the plate. The volcano erupted immediately.

Even if the terrain is completed, all Meeple will return to the player's supply area. Buildings such as barns or fortresses are put back into boxes and are no longer used.

Except for the volcano itself, all the Meeple and buildings on the other eight surrounding areas were immediately turned over.

Step 1: pink players place plates

Step 2: Perform the volcanic eruption operation. And secretly draw a plate face down and place it on the bottom of the volcanic plate.  
At this time, all the panels on the back are regarded as blank areas.

Because the terrain has changed again.

It's the purple player's turn for the next round. Place tiles in purple, and a complete castle counts 4 points. And return to the purple player's supply area.

Example 2:

Step 1: The red player places a plate, leading to the completion of the road.

Step 2: Because of the hill effect, the red player has a higher terrain.

The red player gets the full road score and gets 8 points.

Yellow players have no points.

### Example 3: The chain effect of volcanic eruptions.

Step 1: The blue player places the volcano tiles.

Step 2: Perform the volcanic eruption operation. And secretly draw a plate face down and place it on the bottom of the volcanic plate. And drive away Meeple around the volcano.

Added variant rules (players can decide for themselves):

As long as one volcano erupts, the volcano on the upper right will also erupt.

Launch conditions: As long as the volcano erupts on the opposite corner or adjacent to it.

**Note: The natural disaster (destruction) effect is permanent.**

Example 4:

Step 1: The blue player places the volcano tiles.

Step 2: Perform the volcanic eruption operation. And secretly draw a plate face down and place it on the bottom of the volcanic plate. And drive away Meeple around the volcano.

Launch conditions: As long as the volcano erupts on the opposite corner or adjacent to it.

Note: The natural disaster (destruction) effect is permanent.
